MC SPORT LINE PERSONALISATION

**he extensive list of Maserati personalization options available on the entire range has been further enriched with the new “MC Sport Line”.**

Created to emphasize the sporting DNA of Maserati cars, the “MC Sport Line” is for customers who wish to express their passion for sports cars with a dynamic look, and want advanced technical solutions to enhance their driving pleasure. The “MC Sport Line” range was developed with the help of the Maserati Corse racing team’s technicians on the basis of their competition experience.

The designers of the Maserati Style Center were also inspired by the world of racing: it is no coincidence that all the components are made of carbon fiber, which has always been the material of choice with race teams.

Customers can select options from the “MC Sport Line” to personalize both the exteriors and the interiors of the Maserati GranTurismo S Automatic while also offering customers the possibility of enhancing the handling of their car via a special suspension setup.

---

## MC AERODYNAMIC PACKAGE - I

---

**MC** Sport Line

The aerodynamic look can be modified with the addition of two front deflectors and a rear spoiler, in carbon fiber, developed with the aid of race-track tests performed with the GranTurismo MC Concept.

The new aerodynamic parts increase the vertical load (coefficient of lift:  $C_z$  -30%), allowing faster cornering coming out of a corner.

The aerodynamic additions give the car a distinctive racing look, an effect also assisted by the "dark line" on the exterior and by the black painted side-skirts, which provides an even more dynamic side profile.

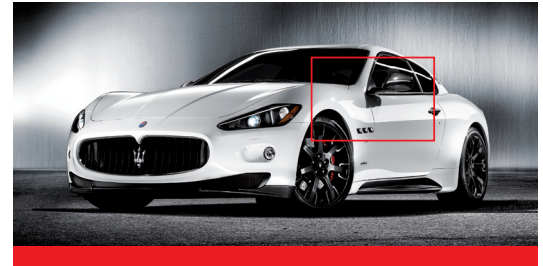

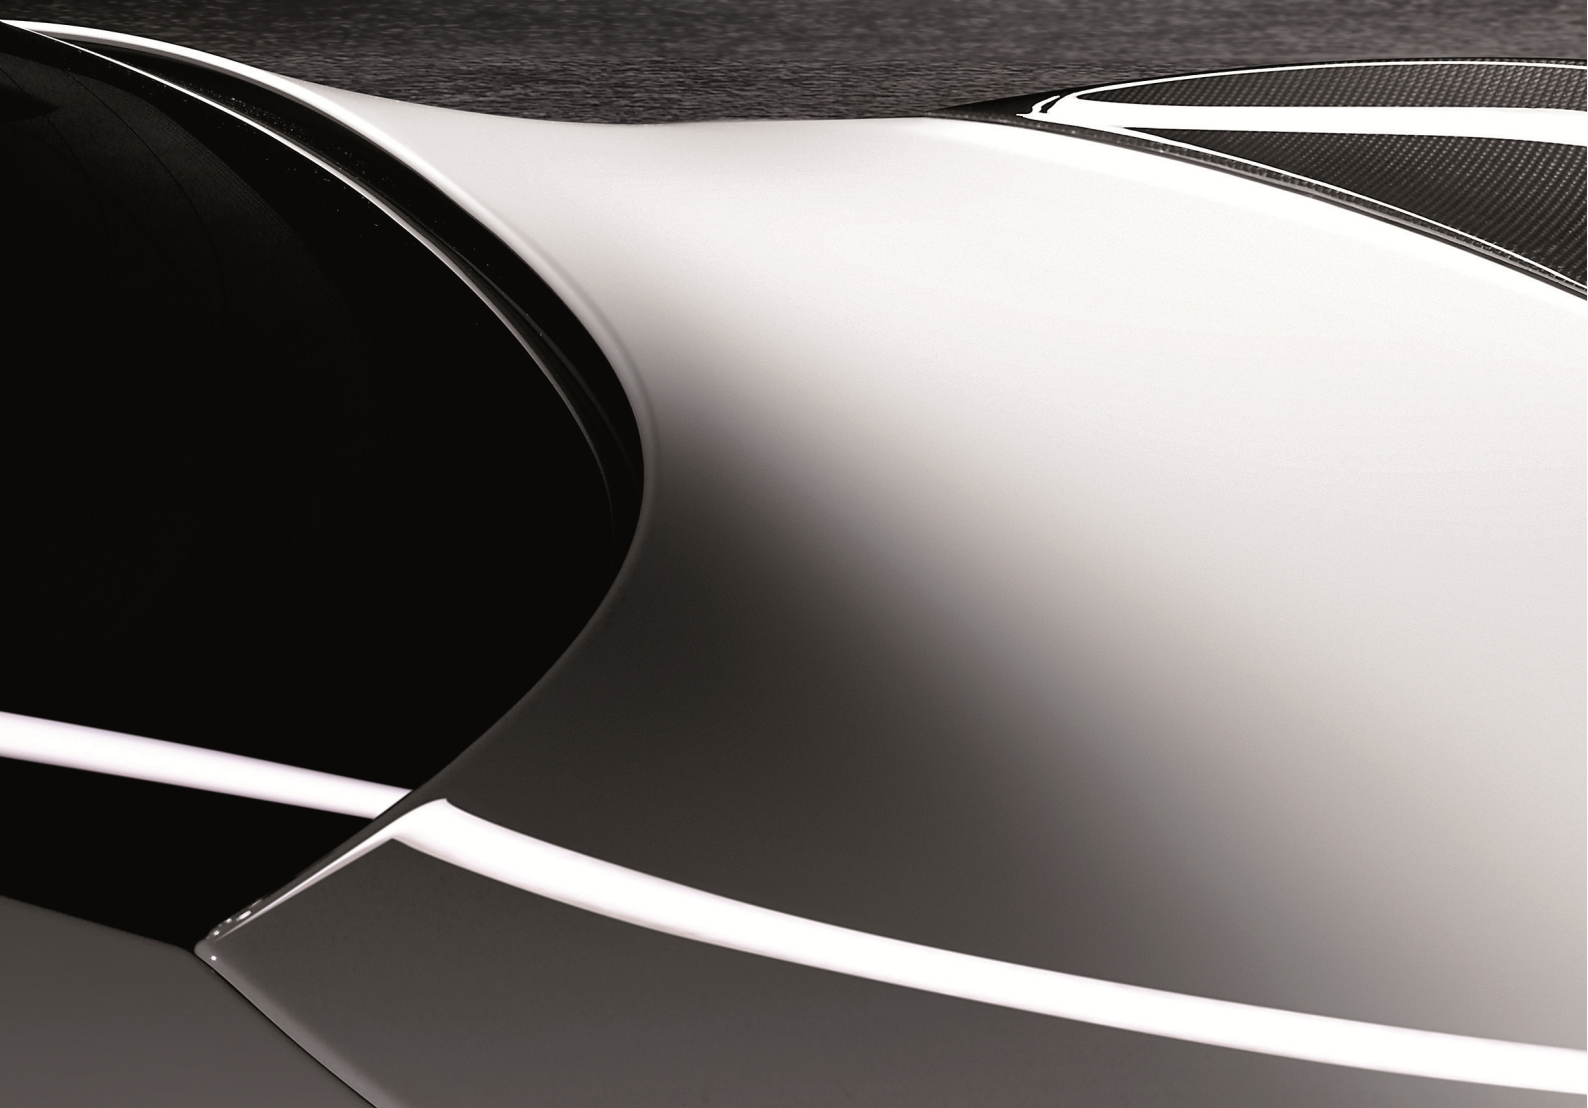

---

## MC AERODYNAMIC PACKAGE - II

***TMC*** Sport Line

An even sportier exterior can be achieved by combining the carbon fiber aerodynamic additions with side mirror housings and door handles in the same material.

## GLOSS BLACK NEPTUNE WHEELS

---

***ME*** Sport Line

The dark shade of the carbon fiber is taken up by the gloss black paint of the 20" wheels, with the aggressive Neptune design.

## INTERIOR CARBON PACKAGE

---

**MC** *Sport Line*

In “MC Sport Line” interiors, carbon fiber sets the style: dashboard, door panels and rear side panels all have carbon fiber moldings, while other interior details are finished in gloss black to provide a closer match with the carbon design.

## INTERIOR CARBON PACKAGE - EVOLUTION I

---

***MC*** Sport Line

The carbon fiber door sill with the script “MC Sport Line” highlights the fact that you are stepping into a race-inspired environment; carbon fiber dominates the central tunnel, highlighting the brilliance of the chrome trim pieces.

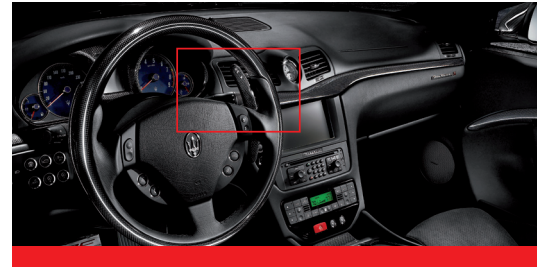

---

## INTERIOR CARBON PACKAGE – EVOLUTION II

---

***M/C*** Sport Line

To give the interior an even more distinguished look, the entry package can be added to the carbon fiber-clad instrument panel and longer gear shift paddles, also in the same carbon fiber.

## ADDITIONAL CONTENTS

**MC** Sport Line

---

For those in search of the ultimate in racing style, additional items are available seperately:

- Black leather steering wheel with carbon fibre-clad rim;
- Machined aluminium pedals with "MC" logo in red, complete with footrest on left.

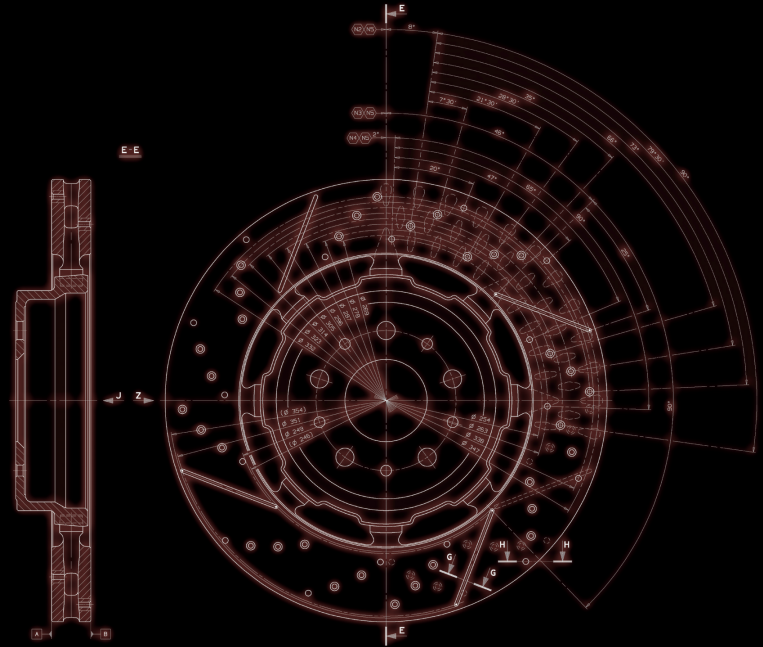

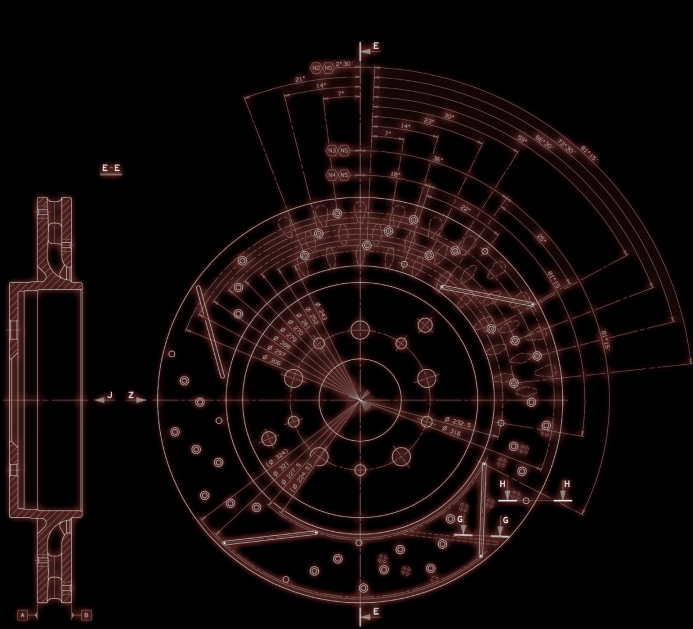

Marshall

ME Sport Line

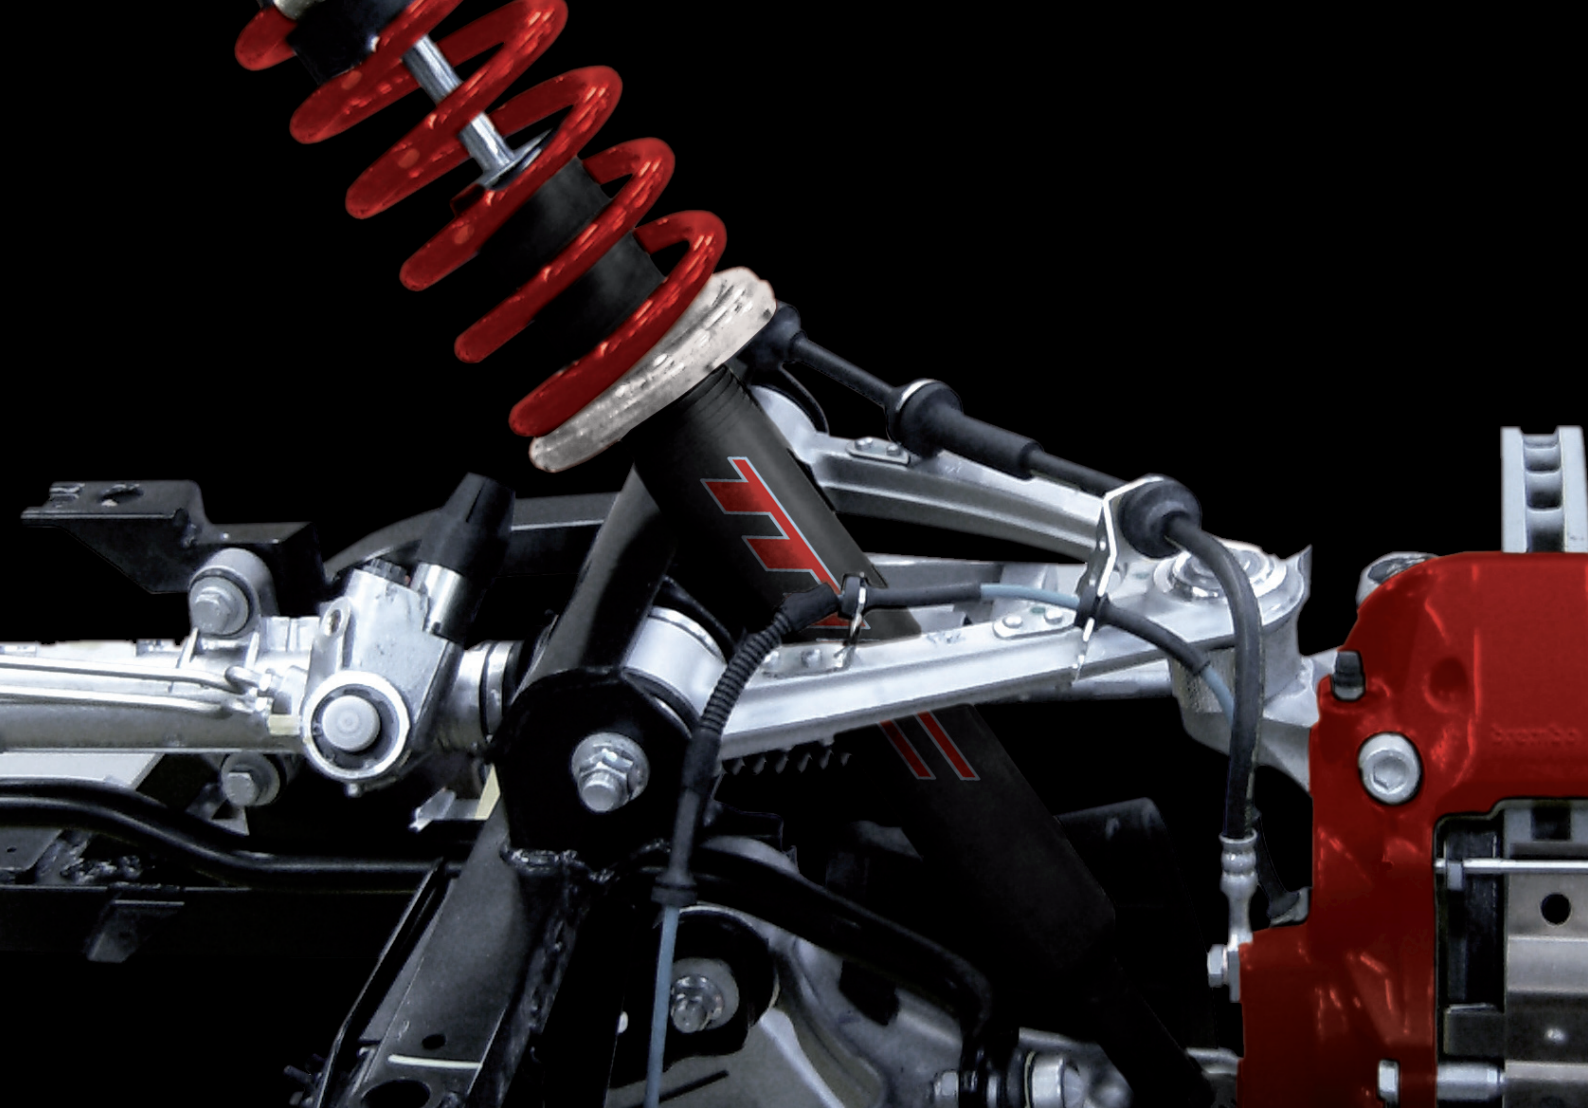

**The “MC Sport Line” program also provides the option of a race-bred suspension and upgraded disc brakes on GranTurismo S Automatic.**

The “MC Sport Line” suspension features single-setting dampers and a more rigid set-up, where attention has also been paid to highlight an aggressive look: the exterior of the dampers in matt black are marked by a red “MC” logo in the same red color as the springs.

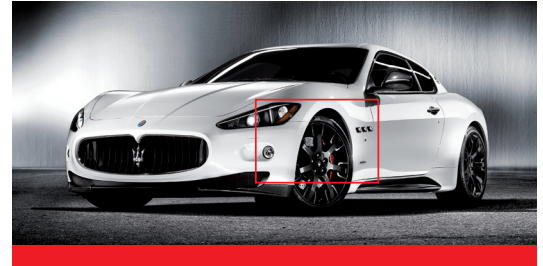

The “MC Sport Line” suspension is combined with perforated and slotted front and rear disc brakes which help provide a more immediate braking action during sustained spirited driving.

Compared to the standard units, the MC Sport Line discs are perforated around the perimeter for less fade along with 4 slots that help keep the brake pad clean, limiting loss of performance due to the build-up of brake dust, etc., caused by braking: while in the case of rain, their mechanical action helps to break up the film of water. Blind holes have been added inside and outside of the braking surface for more uniform wear of the brake pad and disc surfaces, keeping braking efficiency constant over time.

The electronically controlled dampers installed on the Maserati GranTurismo S Automatic can be replaced with a fixed-setting type (spring and dampers with damping factor increased by + 8%), combined with a larger-diameter roll bar for the rear. This different set-up removes the filtering effect of the electronics to give a more direct "feel" of the car's responses and reduces the load transfer (rolling angle - 8%) increasing agility and driving pleasure.

*We suggest combining the aerodynamic package with the sport suspension set-up as this combination allows both the wings and the suspensions to work more effectively to achieve the best performance in handling.*
