

EMAIL SIGNATURE INSTALLATION INSTRUCTIONS - iPhone & iPad (Requires iOS6 or higher) These instructions are for the iOS Native Email App only. The Outlook Email App does not support the use of HTML email signatures.

You need to set up your initial signature first.

Iphone/Ipad:

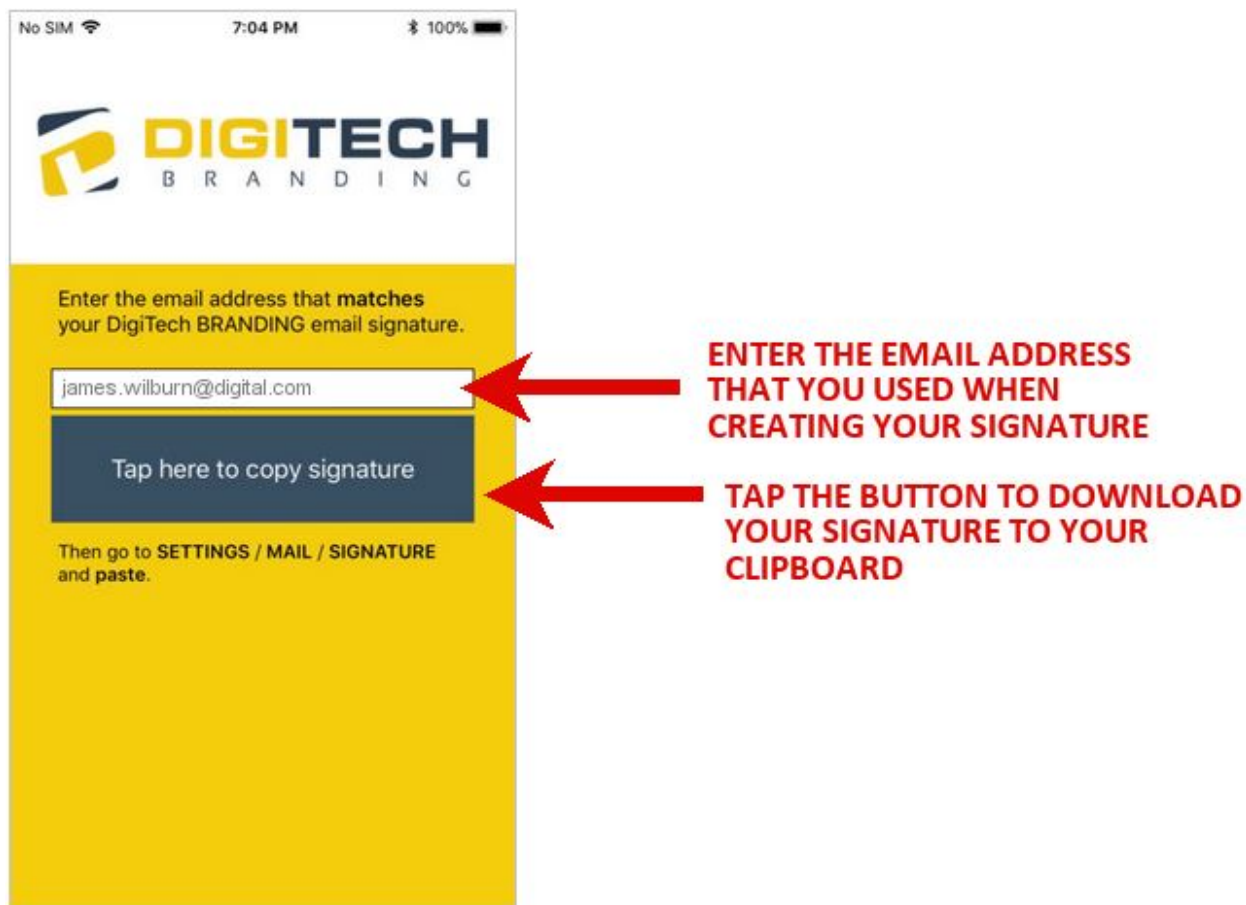

Step 1 - Get the Free App

HTML Email Signature Installer by Digitech Branding

<https://itunes.apple.com/us/app/html-email-signature-installer/id1314241918?ls=1&mt;=8>

Open apple store on your Iphone and search for "html email Signature Installer" 1- Download and install, then follow the steps

Step 2 - Use the Free App

Step 3 - Install Your Signature

Begin by going to "Settings" on your Iphone

In Settings, scroll down to "Mail"

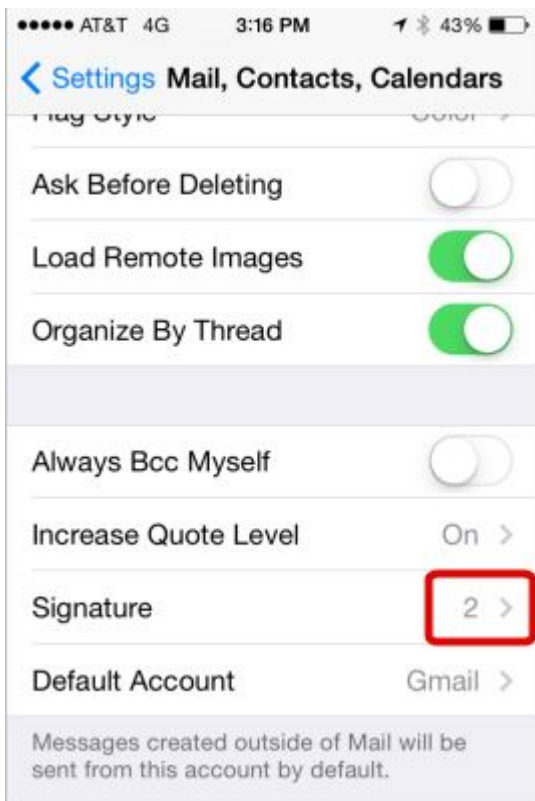

Next, scroll down to "Signature" then tap to open the Signature window.

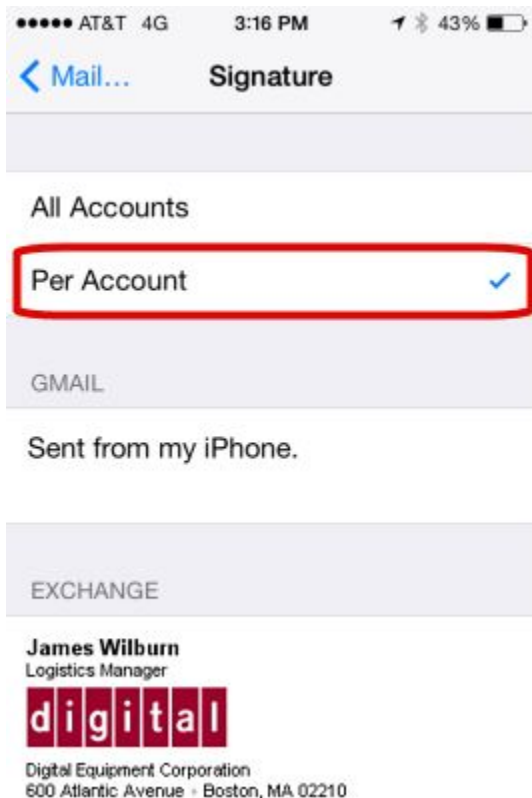

Note: If you have more than one email account set up you will see the number of accounts to the right of "signature" - 2 in this case.

If you have multiple accounts, you need to select "Per Account" so that you can apply the new signature to your business email account only.

Hold your finger (or double tap) in the white edit window until the "Paste" prompt appears. Tap the "Paste" prompt.

Your signature will appear, properly formatted, in the Signature window. Tap out of Settings. Your signature will be saved automatically. Step 4: Use your Signature:

Your email signature will now automatically appear when you go to compose or reply to a message.

Note: Hyperlinks in email never work while you are composing or responding to a message. To test your links, compose a message to yourself, and try the links when you have received it and are reading it.
